

# Amar Koonar

236-518-6261 | Burnaby, BC | [ask41@sfu.ca](mailto:ask41@sfu.ca) | [in](#) LinkedIn | [GH](#) GitHub | [PF](#) Portfolio

## TECHNICAL SKILLS

**Languages:** PowerShell, JavaScript, TypeScript, HTML/CSS, Java, C#, Python, C, C++, SQL (PostgreSQL)

**Frameworks:** React.js, Next.js, Node.js, Express.js, Tailwind CSS

**Developer Tools:** Docker, AWS, Cypress, Git, GitHub, Vite, Slack, GDB

**Transferable Skills:** Problem-solving, teamwork, communication, time management, adaptability

## PERSONAL PROJECTS

**GitGood**  | *Next.js, React, Tailwind CSS, Shadcn/ui, OpenAI API, Github API* May 2025. – Aug 2025

- Developed a web app to help developers level up their GitHub presence with AI-powered tools, beginner-friendly issue discovery, and personalized growth insights.
- Implemented CI/CD pipeline using Vercel and Github Actions for rapid deployment and automated previews.
- Built and tested end-to-end functionality using Playwright to ensure reliability and intended behavior.

**SFU Weather-Bot**  | *Python, BeautifulSoup API, Twitter AP* Jun. 2024 – Dec. 2024

- Developed a Python-based Twitter bot to deliver real-time weather, road, and parking updates for SFU campus.
- Web-scraped images and data about SFU weather conditions using the Python BeautifulSoup library
- Posted data routinely to Twitter using Twitter API

**Custom Linux Shell** | *C, Linux, POSIX, System Calls, Process Management*

- Coded a fully functional command-line shell that supports command parsing, and background job execution.
- Implemented process control using `fork()`, `exec()`, and `wait()`, enabling multitasking with separate processes
- Integrated error handling and signal management (`SIGINT`, `SIGCHLD`) to improve robustness and user experience.

**Mini TCP Server** | *C, Linux, TCP/IP, epoll, Non-blocking I/O* Feb. 2025 - May. 2025

- Developed a lightweight TCP server capable of managing multiple simultaneous client connections.
- Implemented event-driven concurrency using `epoll` and non-blocking sockets for efficient request handling.
- Designed a scalable architecture with support for continuous client communication and graceful connection termination.

## EXPERIENCE

**Junior Full Stack Developer Co-op** Jan. 2026 – Aug 2026

*Operto Guest Technologies*

*Vancouver, BC*

- Collaborated in an Agile environment using Kanban to manage tasks, priorities, and delivery.
- Worked on a facade microservice to act as a service layer between backend systems and frontend clients by exposing type-safe tRPC endpoints.
- Worked with AWS services including CloudWatch, S3, DynamoDB, Lambda, Cloudfront, and SQS to support cloud-based application development and monitoring.
- Built an event-driven Google Ads API integration that published data for consumption by downstream services.
- Optimized a RAG agent by decomposing queries by intent, improving vector database retrieval accuracy.
- Debugged frontend and backend issues by tracing API requests, reviewing service logs, testing tRPC endpoints, and fixing bugs across the full application stack.

## RELEVANT COURSEWORK

### CMPT 276 - Introduction to Software Engineering

- Integrated and applied the Software Development Life Cycle (SDLC) with a focus on Agile methodologies.
- Practiced team collaboration using version control, code reviews, and CI/CD workflows.
- Utilized RESTful APIs in team projects, handling data exchange and endpoint handling in projects.

### CMPT 201 - Systems Programming

- Explored process management, file systems, concurrency, Docker, and threading
- Implemented network communication using TCP and UDP sockets in C, demonstrating proficiency in socket programming and client-server architecture.

## EDUCATION

**Simon Fraser University** | **BSc Dean's Honour Roll in Computing Science** Sept. 2022 – Present
